Welcome to OHG ONE HUB GLOBAL

About Us

OHG365 is an innovative EdTech platform offering industry-ready online courses, coding terminals, tutorials, real-time challenges, and placement-driven training programs.

Our goal is to bridge the gap between learning and earning, empowering students and professionals with hands-on skills, real-world projects, and global career opportunities.

WHY OHG?

Cutting-edge curriculum designed with
industry experts

LMS with lifetime access

Global certifications

100% Placement
Orientation

Live + Recorded sessions

Integrated Coding
Terminals

Real-time challenges &
hackathons

Portfolio & resume
support

COURSES OFFERED

Full Stack Java / Python

DevOps AWS & AZURE

Why Data Engineering is Best

The Data Engineering Program is designed to train students and working professionals to build, manage, and optimize large-scale data systems. This program focuses on data pipelines, big data technologies, cloud platforms, and real-time processing, preparing learners for high-demand roles in data-driven organizations.

Data Engineering is the backbone of Data Science, Analytics, and AI systems. Data Engineers design and maintain the infrastructure that enables organizations to collect, store, process, and analyze massive volumes of data efficiently and securely.

A Data Engineer understands:

- How data is generated and collected
- How to build scalable pipelines
- How to store and process structured & unstructured data
- How to deliver clean, reliable data for analytics and AI systems

More Career Flexibility & Job Roles

JOB ROLES	Package	Experience
Junior Data Engineer	₹4 – ₹8 LPA	0-2 Years
Mid-Level Data Engineer	₹8 – ₹18 LPA	2-4 Years
Senior Data Engineer	₹18 - ₹30 LPA	4-5 Years
Cloud Data Engineer	₹45 – ₹50 LPA	5+ Years
Big Data Engineer	₹45 - ₹50 LPA	5+ Years
Data Architect / Lead	₹45 – ₹50 LPA	5+ Years

Module 01

Programming Fundamentals (Python)

- Introduction to programming
- Python basics & syntax
- Variables, data types, loops & functions
- Working with files & modules

Outcome:

- Build strong programming logic for data processing tasks.

Module 02

SQL & Database Systems

- SQL basics & advanced queries
- Joins, subqueries & indexing
- Data modeling concepts
- Relational vs NoSQL databases

Outcome:

- Design, query, and manage databases efficiently.

Module 03

Linux & Shell Scripting

- Linux commands & file system
- Shell scripting basics
- Process & resource management

Outcome:

- Operate and automate data workflows in real environments.

Module 04

Data Warehousing Concepts

- OLTP vs OLAP
- Star & snowflake schema
- Data warehouse architecture
- ETL vs ELT

Outcome:

- Understand enterprise-level data storage systems.

Module 05

Big Data Fundamentals

- Big Data ecosystem overview
- Hadoop architecture
- HDFS & YARN

Outcome:

- Handle large-scale distributed data systems.

Module 06

Apache Spark

- Spark architecture
- RDDs, DataFrames & Spark SQL
- Performance optimization
- PySpark

Outcome:

- Process massive datasets efficiently.

Module 07

Data Ingestion Tools

- Apache Kafka
- Real-time data streaming
- Message queues & event systems

Outcome:

- Build real-time data ingestion pipelines.

Module 08

ETL & Data Pipelines

- ETL pipeline design
- Data validation & transformation
- Scheduling workflows

Outcome:

- Create automated, reliable data pipelines.

Module 09

Cloud Data Engineering (AWS / Azure / GCP)

- Cloud storage (S3, Blob, GCS)
- Cloud databases
- Data services & pipelines

Outcome:

- Deploy scalable data systems on the cloud.

Module 10

Data Orchestration

- Apache Airflow
- Workflow scheduling
- Monitoring & logging

Outcome:

- Manage complex data workflows end-to-end.

Module 11

NoSQL & Modern Databases

- MongoDB
- Cassandra
- Redis basics

Outcome:

- Work with unstructured & semi-structured data.

Module 12

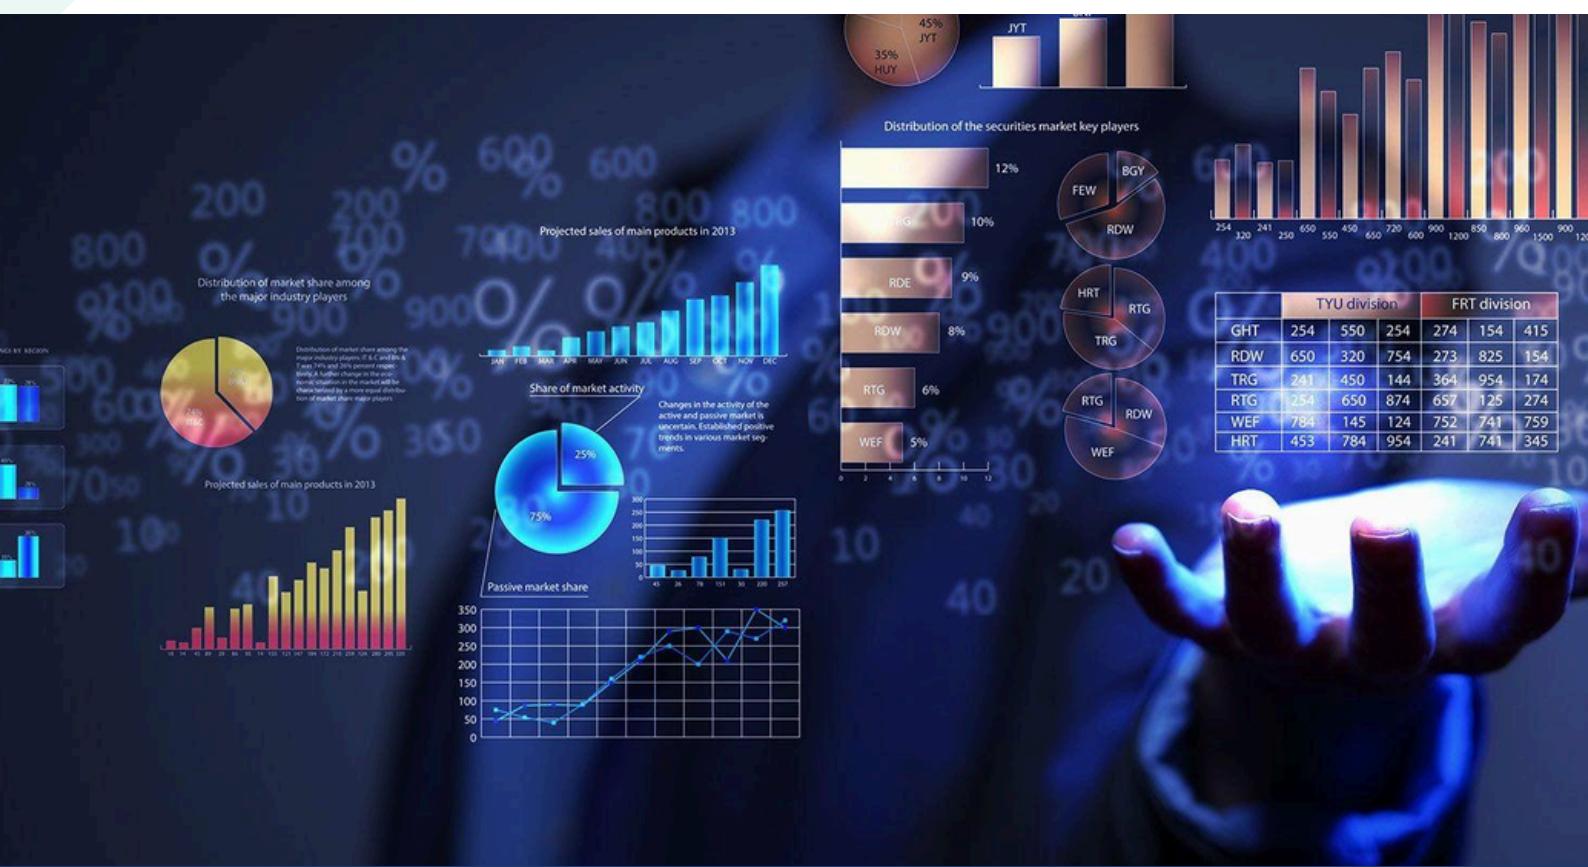

Data Security & Governance

- Data privacy concepts
- Access control
- Data quality & compliance

Outcome:

- Ensure secure and compliant data systems.
