DEVOPS AZURE CLOUD

An innovative, high-quality DEVOPS & AZURE CLOUD curriculum tailored to diverse learner and industry needs.

**100% Job
Assistance**

Welcome to OHG ONE HUB GLOBAL

About Us

OHG365 is an innovative EdTech platform offering industry-ready online courses, coding terminals, tutorials, real-time challenges, and placement-driven training programs.

Our goal is to bridge the gap between learning and earning, empowering students and professionals with hands-on skills, real-world projects, and global career opportunities.

WHY OHG?

Cutting-edge curriculum designed with
industry experts

LMS with lifetime access

Global certifications

100% Placement
Orientation

Live + Recorded sessions

Integrated Coding
Terminals

Real-time challenges &
hackathons

Portfolio & resume
support

COURSES OFFERED

Full Stack Java / Python

Why DEVOPS & AZURE CLOUD in Best

Azure & DevOps represent a modern approach to building, deploying, and managing applications in cloud-driven environments. Microsoft Azure provides a powerful and scalable cloud platform, while DevOps practices focus on collaboration, automation, and continuous delivery, enabling organizations to release software faster, more reliably, and with higher quality.

Azure offers a wide range of cloud services including virtual machines, storage, databases, networking, security, and identity management, allowing businesses to host and scale applications globally. When combined with DevOps practices such as Continuous Integration and Continuous Deployment (CI/CD), infrastructure automation, and monitoring, Azure becomes a complete ecosystem for modern application development and operations.

DevOps bridges the gap between development and operations teams by introducing automated workflows, version control, configuration management, and infrastructure as code. Tools like Azure DevOps, Git, Docker, Kubernetes, and scripting technologies help automate application builds, testing, deployments, and infrastructure provisioning, reducing manual effort and operational errors.

This Azure & DevOps program is designed to build end-to-end cloud and DevOps skills, starting from system administration and networking fundamentals to advanced CI/CD pipelines, containerization, cloud security, and infrastructure automation. Learners gain hands-on experience through real-world projects and industry-aligned practices, preparing them to manage scalable, secure, and high-availability cloud environments.

By the end of the program, participants are equipped to work as job-ready DevOps and Azure Cloud professionals, capable of supporting modern cloud applications, automating deployments, maintaining system reliability, and contributing effectively to fast-paced IT and cloud-driven organizations.

More Career Flexibility & Job Roles

JOB ROLES	Package	Experience
DevOps Intern	2.4-5.0LPA	0-2 Years
DevOps Engineer (Fresher)	₹4 – ₹7 LPA	0-3 Years
Azure Cloud Engineer – Junior	₹4.5 – ₹8 LPA	0-2 Years
Cloud Support Engineer	₹3.5 – ₹6 LPA	0-2 Years
CI/CD Engineer – Trainee	₹4 – ₹6.5 LPA	0-3 Years
SRE – Junior	₹3 – ₹5.5 LPA	0-2 Years

Module 01

Introduction to Data Analytics & AI

- What is DevOps?
- Traditional IT vs DevOps culture
- DevOps lifecycle & workflows
- Introduction to Cloud Computing
- Overview of Microsoft Azure

Outcome:

- Understand DevOps principles and cloud fundamentals.

Module 02

Linux & Windows Administration

- Linux fundamentals for DevOps
- Windows Server basics
- File systems & permissions
- User & process management
- Service & package management

Outcome:

- Manage Linux and Windows systems for cloud environments.

Module 03

Networking Fundamentals

- IP addressing & DNS
- TCP/IP basics
- Load balancing concepts
- Firewalls & network security
- Azure networking overview

Outcome:

- Understand networking concepts required for DevOps & Azure.

Module 04

Version Control with Git

- **Git fundamentals**
- **Branching & merging strategies**
- **Git workflows**
- **Collaboration using GitHub / Azure Repos**

Outcome:

- **Manage source code and collaborate efficiently.**

Module 05

Shell Scripting & PowerShell

- **Bash scripting fundamentals**
- **PowerShell basics**
- **Automation scripts**
- **Error handling & logging**

Outcome:

- **Automate system and deployment tasks.**

Module 06

Configuration Management & Automation

- **Infrastructure automation concepts**
- **Configuration consistency**
- **Environment standardization**
- **Automation best practices**

Outcome:

- **Maintain stable and automated environments.**

Module 07

Azure DevOps (CI/CD Pipelines)

- Azure DevOps services overview
- Build pipelines
- Release pipelines
- YAML-based pipelines
- Pipeline security & best practices

Outcome:

- Implement continuous integration and deployment pipelines.

Module 08

Containers & Docker

- Containerization concepts
- Docker architecture
- Building Docker images
- Managing containers
- Docker registries

Outcome:

- Deploy applications using container technology.

Module 09

Kubernetes with Azure (AKS)

- Kubernetes architecture & components
- Azure Kubernetes Service (AKS)
- Deploying applications on AKS
- Scaling & monitoring containers

Outcome:

- Manage container orchestration using Kubernetes.

Module 10

Azure Core Services

- Azure Virtual Machines
- Azure Storage services
- Azure Databases
- Azure Active Directory (AAD)

Outcome:

- Work with core Azure cloud services.

Module 11

Azure Networking & Security

- Virtual Networks (VNet)
- Subnets & routing
- Load balancers & application gateways
- Network Security Groups (NSG)
- Identity & Access Management (IAM)

Outcome:

- Design secure and scalable Azure networks.

Module 12

Infrastructure as Code (IaC)

- Infrastructure as Code concepts
- Writing infrastructure templates
- Automating Azure resources
- Version-controlled infrastructure

Outcome:

- Provision and manage cloud infrastructure using code.

Module 13

Monitoring, Logging & Troubleshooting

- Azure monitoring tools
- Logs & alerts
- Performance monitoring
- Troubleshooting cloud & pipeline issues

Outcome:

- Maintain high availability and system reliability.

Module 14

DevOps Security & Best Practices

- DevSecOps concepts
- Security in CI/CD pipelines
- Secrets management
- Compliance & governance basics

Outcome:

- Implement secure DevOps practices.

Module 15

Real-Time DevOps & Azure Project

- End-to-end CI/CD implementation
- Infrastructure provisioning
- Container deployment
- Monitoring & documentation

Outcome:

- Become job-ready with real-world DevOps & Azure experience.
