DEVOPS AWS CLOUD

An innovative, high-quality DEVOPS & AZURE CLOUD curriculum tailored to diverse learner and industry needs.

**100% Job
Assistance**

Welcome to OHG ONE HUB GLOBAL

About Us

OHG365 is an innovative EdTech platform offering industry-ready online courses, coding terminals, tutorials, real-time challenges, and placement-driven training programs.

Our goal is to bridge the gap between learning and earning, empowering students and professionals with hands-on skills, real-world projects, and global career opportunities.

WHY OHG?

Cutting-edge curriculum designed with
industry experts

LMS with lifetime access

Global certifications

100% Placement
Orientation

Live + Recorded sessions

Integrated Coding
Terminals

Real-time challenges &
hackathons

Portfolio & resume
support

COURSES OFFERED

Full Stack Java / Python

Why DEVOPS & AWS CLOUD in Best

DevOps with AWS combines modern DevOps practices with the power and scalability of Amazon Web Services (AWS) to design, deploy, automate, and manage cloud-native applications. AWS provides a highly reliable, secure, and globally distributed cloud platform, while DevOps focuses on automation, continuous integration, continuous deployment (CI/CD), and collaboration, enabling faster software delivery and operational efficiency.

AWS offers a comprehensive suite of cloud services including EC2, S3, RDS, VPC, IAM, Lambda, and monitoring services, which allow organizations to build, deploy, and scale applications seamlessly. When integrated with DevOps tools and practices such as Git, CI/CD pipelines, Infrastructure as Code (IaC), containerization, and monitoring, AWS becomes a complete ecosystem for modern application development and operations.

DevOps practices help eliminate silos between development and operations teams by introducing automated workflows, version control, configuration management, and cloud automation. Tools like AWS CodePipeline, CodeBuild, CodeDeploy, Jenkins, Docker, Kubernetes (EKS), and Terraform are used to automate application builds, testing, deployments, and infrastructure provisioning on AWS, reducing manual effort and improving reliability.

This DevOps with AWS program is designed to develop end-to-end cloud and DevOps skills, starting from Linux and networking fundamentals to advanced CI/CD pipelines, container orchestration, cloud security, monitoring, and infrastructure automation. Through hands-on labs, real-time projects, and industry-aligned practices, learners gain practical experience in building and managing scalable, secure, and high-availability systems on AWS.

By the end of the program, participants are prepared to work as job-ready DevOps and AWS Cloud professionals, capable of automating deployments, managing cloud infrastructure, supporting microservices-based applications, and ensuring system reliability in modern cloud-driven organizations.

More Career Flexibility & Job Roles

JOB ROLES	Package	Experience
DevOps Intern	2.4-5.0LPA	0-2 Years
DevOps Engineer (Fresher)	₹4 – ₹7 LPA	0-3 Years
AWS Cloud Engineer – Junior	₹4.5 – ₹8 LPA	0-2 Years
Cloud Support Engineer	₹3.5 – ₹6 LPA	0-2 Years
CI/CD Engineer – Trainee	₹4 – ₹6.5 LPA	0-3 Years
SRE – Junior	₹3 – ₹5.5 LPA	0-2 Years

Module 01

Introduction to DevOps & Cloud Computing

- What is DevOps?
- Traditional IT vs DevOps culture
- DevOps lifecycle & workflows
- Introduction to Cloud Computing
- Overview of Amazon Web Services (AWS)

Outcome:

- Understand DevOps concepts and cloud fundamentals.

Module 02

Linux Administration for DevOps

- Linux fundamentals
- File systems & permissions
- User & group management
- Process & service management
- Package management

Outcome:

- Manage Linux systems used in DevOps environments.

Module 03

Networking Fundamentals

- IP addressing & DNS
- TCP/IP basics
- Load balancing concepts
- Firewalls & network security
- AWS networking overview

Outcome:

- Understand networking required for cloud deployments.

Module 04

Version Control with Git

- **Git fundamentals**
- **Branching & merging strategies**
- **Git workflows**
- **Collaboration using GitHub / GitLab**

Outcome:

- **Manage source code and collaborate effectively.**

Module 05

Shell Scripting & Automation

- **Bash scripting fundamentals**
- **Writing automation scripts**
- **Error handling & logging**
- **Task scheduling**

Outcome:

- **Automate repetitive system and deployment tasks.**

Module 06

Configuration Management & Automation

- **Configuration management concepts**
- **Infrastructure automation**
- **Environment consistency**
- **Automation best practices**

Outcome:

- **Maintain stable and automated environments.**

Module 07

CI/CD with Jenkins & AWS Tools

- CI/CD concepts
- Jenkins installation & configuration
- AWS CodePipeline, CodeBuild & CodeDeploy
- Pipeline security & best practices

Outcome:

- Implement continuous integration and deployment pipelines.

Module 08

Containers & Docker

- Containerization concepts
- Docker architecture
- Building Docker images
- Managing containers
- Docker registries (ECR)

Outcome:

- Deploy applications using Docker containers.

Module 09

Kubernetes with AWS (EKS)

- Kubernetes architecture
- Amazon EKS overview
- Deploying applications on EKS
- Scaling & monitoring containers

Outcome:

- Manage container orchestration using Kubernetes.

Module 10

AWS Core Services

- EC2 (Virtual Servers)
- S3 (Storage)
- RDS & DynamoDB
- IAM (Identity & Access Management)

Outcome:

- Work with essential AWS services.

Module 11

AWS Networking & Security

- VPC design
- Subnets & routing
- Load balancers
- Security Groups & NACLs
- IAM roles & policies

Outcome:

- Design secure and scalable AWS networks.

Module 12

Infrastructure as Code (IaC)

- Infrastructure as Code concepts
- Terraform / CloudFormation basics
- Automating AWS resources
- Version-controlled infrastructure

Outcome:

- Provision and manage cloud infrastructure using code.

Module 13

Monitoring, Logging & Troubleshooting

- Amazon CloudWatch
- Logs & metrics
- Alerts & notifications
- Performance monitoring

Outcome:

- Ensure system availability and reliability.

Module 14

DevSecOps & Best Practices

- DevSecOps concepts
- Security in CI/CD pipelines
- Secrets management
- Compliance & governance basics

Outcome:

- Implement secure DevOps workflows.

Module 15

Real-Time DevOps with AWS Project

- End-to-end CI/CD implementation
- Infrastructure provisioning
- Containerized deployment
- Monitoring & documentation

Outcome:

- Become job-ready with real-world DevOps & AWS experience.
